

### REASONS TO CONSIDER

#### High Growth Potential

The clean energy transition is well underway. Forecasts suggest that global solar power capacity could more than triple between 2024 and 2030.<sup>(1)</sup>

#### Advancing Clean Technologies

Solar is the most abundant energy resource on earth.<sup>(2)</sup> Increased solar adoption could help minimize the adverse environmental impacts of fossil fuel consumption.

#### Unconstrained Approach

Solar energy is a dynamic theme, supporting a long-term structural shift in worldwide energy use. RAYS invests accordingly, with global exposure across multiple sectors and industries.

## DEFINITIONS

### Solactive Solar Index

The Underlying Index is designed to provide exposure to companies that are positioned to benefit from further advances in the field of solar technology. Specifically, the Underlying Index consists of securities issued by “Solar Companies” as defined by Solactive AG, the provider of the Underlying Index (the “Index Provider”).

(1) International Energy Agency (IEA), Oct 2024

(2) National Renewable Energy Laboratory

Investing involves risk, including the possible loss of principal. The investable universe of companies in which WAYS may invest may be limited. Narrowly focused investments will be more susceptible to factors affecting that sector and subject to more volatility. Solar companies typically face intense competition, short product lifecycles and potentially rapid product obsolescence. These companies may be significantly affected by fluctuations in energy prices (both solar and conventional energy) and in the supply and demand of renewable energy, tax incentives, subsidies and other governmental regulations and policies. Solar companies may be adversely affected by commodity price volatility, changes in exchange rates, imposition of import controls, availability of certain inputs and materials required for production, depletion of resources, technological developments and labor relations. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. WAYS is nondiversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn’t available, the midpoint between the national best bid and national best offer (“NBBO”) as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
