

FUND OBJECTIVE

The Global X Autonomous & Electric Vehicles ETF (DRIV) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive Autonomous & Electric Vehicles Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

KEY FEATURES

High Growth Potential

Advancing Clean Technologies

Unconstrained Approach

SOLACTIVE AUTONOMOUS & ELECTRIC VEHICLES INDEX

SELECTION

- The index is designed to track the performance of companies that have or are expected to have significant exposure to Electric Vehicles and Autonomous Driving segments.
- Companies must have relevant exposure to the below:
 - EV - Electric Vehicles: Produce electric/hybrid vehicles.
 - EVC - Electric Vehicle Components: Produce electric/hybrid vehicle components.
 - AVT - Autonomous Vehicle Technology: Build autonomous vehicles and/or develop hardware and software that facilitates the development of autonomous vehicles.
- Solactive ranks the companies in each segment according to the frequency with which each company is referenced in relation to each segment's specific keywords ("Segment Score"). The number of constituents is the following for each segment:
 - EV - The top 15 companies according to their Segment Score.
 - EVC - The top 30 companies according to their Segment Score (Top 15 "Components" + Top 15 "Materials").
 - AVT - The top 30 companies according to their Segment Score.

SELECTION POOL

- Eligible companies must have:
 - Minimum Market Capitalization of \$500 million if they are not current constituents and \$400 million if they are current constituents.
 - Primary listing in a Developed Market, South Korea or Taiwan.
 - Average Daily Turnover of at least \$2 million over the last six months and \$1.4 million for existing constituents.
 - Listing on a regulated stock exchange in the form of shares tradable for foreign investors without restrictions.
 - Free Float percentage of total shares outstanding of at least 10% or a minimum free float market capitalization of \$1 billion.

WEIGHTING AT SELECTION/REBALANCING

- Index components are weighted according to their Free Float Market Capitalization:
 - Each component is subject to maximum weight of 3%.
 - The maximum weight of companies that rank in the bottom quintile of their respective segment is 2%.
 - Companies that are not in the bottom quintile but have the same Segment Score as companies that are in the bottom quintile, would also be capped at 2%.

REBALANCES/REVIEWS

- The index follows a semi-annual schedule of ordinary adjustment, made on the last trading day of January and July each year.

For more information on the Index, please visit Solactive's website.

*For the complete and current index methodology please refer to the index provider's website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund's investment objectives, risks, and charges and expenses before investing. This and other information can be found in the fund's full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. The investable universe of companies in which DRIV may invest may be limited. The companies in which the Fund invests may be subject to rapid changes in technology, intense competition, rapid obsolescence of products and services, loss of intellectual property protections, evolving industry standards and frequent new product productions, and changes in business cycles and government regulation. There are additional risks associated with investing in mining industries.

International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
