

REASONS TO CONSIDER

High Growth Potential

Dynamic growth potential across structural, cyclical, and turnaround opportunities in Emerging Markets outside of China.

Unlocking Opportunities on the Frontier

The strategy creates capacity to focus on smaller, sometimes overlooked markets, such as Greece, Mexico, and countries in Southeast Asia.

Active Management with ETF Efficiency

EMM delivers access to experienced stock picking across what we deem as the highest quality growth areas within emerging markets outside of China.

As of 3/31/25. Past performance does not guarantee future results. The performance data quoted represent past performance and current returns may be lower or higher. Share prices and investment returns fluctuate and an investor's shares may be worth more or less than original cost upon sale or redemption. For performance data as of the most recent month-end please call (888) 493-8631. Performance shown prior to May 15, 2023 reflects the performance of the Mirae Asset Emerging Markets Fund's I Shares with a NAV conversion ratio of 0.40 applied in connection with the acquisition. Market price returns prior to that date reflects the predecessor fund's NAV return.

*From September 24, 2010 through March 29, 2024, the fund benchmark was the MSCI Emerging Markets Index.

**Effective April 1, 2024, and thereafter, the fund benchmark is the MSCI Emerging Markets ex China Index Net Total Return (NETR) Index.

SECTOR ALLOCATION

COUNTRY ALLOCATION

GROWTH OF \$10K

A hypothetical \$10,000 investment based on the NAV return of the Fund and the Predecessor Fund's Class I shares on 9/24/10 would have been worth \$13,881 on 3/31/25. Assumes reinvestment of dividends and capital gains. Past performance does not guarantee future results.

DEFINITIONS

MSCI Emerging Markets ex China Index Net Total Return	MSCI Emerging Markets ex China Index Net Total Return is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets excluding China. An investor cannot invest directly in an index. Net total return indices reinvest dividends after the deduction of withholding taxes, using (for international indices) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.
MSCI Emerging Markets NR Index	MSCI Emerging Markets NR Index is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. An investor cannot invest directly in an index. Net total return indices reinvest dividends after the deduction of withholding taxes, using (for international indices) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.
Active share	Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share was calculated including cash held in the Fund.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.
Tracking Error	Tracking error is the divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.
Up Capture	Upside capture ratio measures a strategy's performance in up markets relative to an index. A value over 100 indicates that an investment has outperformed the benchmark during periods of positive returns for the benchmark.
Down Capture	Down capture measures a strategy's performance in down markets relative to the index. A value of less than 100 indicates that an investment has lost less than its benchmark during periods of negative returns for the benchmark.
Standard Deviation	A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period of time.

*Effective April 1, 2024, and thereafter, the fund benchmark is the MSCI Emerging Markets ex China Index Net Total Return (NETR) Index.

⁽¹⁾ Effective May 12, 2023, the fund acquired the performance, financial, accounting and other historical information of the Mirae Asset Emerging Markets Fund. Performance shown prior to May 15, 2023 reflects the return of the Mirae Asset Emerging Markets Fund's I shares with a NAV conversion ratio of 0.40 applied in connection with the acquisition. Market price returns prior to that date reflects the predecessor fund's NAV return.

Investing involves risk, including the possible loss of principal. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. A small number of companies and industries may represent a large portion of the market in a particular country or region, and these companies and industries can be sensitive to adverse social, political, economic or regulatory developments in that country or region.

EMM is actively managed, which could increase its transaction costs (thereby lowering its performance) and could increase the amount of taxes you owe by generating short-term gains, which may be taxed at a higher rate. The information provided is not intended for trading purposes, and should not be considered investment advice.

Carefully consider the Fund's investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the Fund's full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time.
