Global X NASDAQ 100® Risk Managed Income ETF

Ticker: QRMI Exchange: NASDAQ

INVESTMENT OBJECTIVE

The Global X NASDAQ 100® Risk Managed Income ETF (the "Fund") seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Nasdaq-100 Monthly Net Credit Collar 95-100 Index (the "Underlying Index").

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares ("Shares") of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.60%
Distribution and Service (12b-1) Fees:	None
Other Expenses:	0.00%
Total Annual Fund Operating Expenses:	0.60%

Example: The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years	Five Years	Ten Years
\$61	\$192	\$335	\$750

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 18.43% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its total assets in the securities of the Nasdaq-100 Monthly Net Credit Collar 95-100 Index (the "Underlying Index"). The Fund's 80% investment policy is non-fundamental and requires 60 days prior written notice to shareholders before it can be changed.

The Underlying Index measures the performance of a risk managed income strategy that holds the underlying stocks of the NASDAQ 100® Index and applies an options collar strategy (i.e., a mix of short (sold) call options and long (purchased) put options) on the NASDAQ 100® Index. The Underlying Index specifically reflects the performance of the component securities of the NASDAQ 100® Index, combined with a long position in 5% out-of-the money ("OTM") put options and a short position in at-the-money ("ATM") call options, each corresponding to the value of the portfolio of stocks in the NASDAQ 100® Index. The options collar seeks to generate a net-credit, meaning that the premium received from the sale of the call options will be greater than the premium paid when buying the put options. The implications of the long put option and short call option are described in more detail here:

Put Options - When an investor purchases a put option, the investor pays an amount (premium) to acquire the right (but not the obligation) to sell shares of a reference asset at a specified exercise ("strike") price on the expiration date. If the reference asset closes below the strike price as of the expiration date and the investor exercises the put option, the investor will be entitled to receive the difference between the value of the reference asset and the strike price. If the reference asset closes above the strike price as of the expiration date, the put option may end up worthless and the investor's loss is limited to the amount of premium it paid.

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

Call Options – When an investor sells a call option, the investor receives a premium in exchange for an obligation to sell shares of a reference asset at a strike price on the expiration date if the buyer of the call option exercises it. If the reference asset closes above the strike price as of the expiration date and the buyer exercises the call option, the investor will have to pay the difference between the value of the reference asset and the strike price. If the reference asset closes below the strike price as of the expiration date, the call option may end up worthless and the investor retains the premium.

On a monthly basis, the Underlying Index will take long positions in monthly put options with an exercise price generally at 5% below the prevailing market price of the NASDAQ 100® Index and take short positions in monthly call options with an exercise price generally at the prevailing market price of the NASDAQ 100® Index. However, if put and/or call options with those precise strike prices are unavailable, the Underlying Index will instead select the put option with the strike price closest to 5% below the prevailing market price of the NASDAQ 100® Index, and call options with the strike price closest to the prevailing market price of the NASDAQ 100® Index. Each option position will (i) be traded on a national securities exchange; (ii) be held until the expiration date; (iii) expire on its date of maturity (in the next calendar month); (iv) only be subject to exercise on its expiration date; and (v) be settled in cash.

The NASDAQ 100® Index is a modified market capitalization weighted index containing equity securities of the 100 largest non-financial companies listed on the NASDAQ Stock Market. Modified capitalization weighting seeks to weight constituents primarily based on market capitalization, but subject to caps on the weights of the individual securities. Generally speaking, this approach will limit the amount of concentration in the largest market capitalization companies and increase company-level diversification. The Fund's investment objective and Underlying Index may be changed without shareholder approval.

The Underlying Index is sponsored by Nasdaq, Inc. (the "Index Provider"), which is an organization that is independent of, and unaffiliated with, the Fund and Global X Management Company LLC, the investment adviser for the Fund (the "Adviser"). In addition, any determinations related to the constituents of the Underlying Index are made independent of the Fund's portfolio managers. The Index Provider determines the relative weightings of the securities in the Underlying Index and publishes or designates a third-party index calculation agent to publish information regarding the market value of the Underlying Index.

The Adviser uses an indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to "outperform" the Underlying Index and does not seek temporary defensive positions when markets decline or appear overvalued. The call options sold by the Fund will be collateralized by the Fund's equity holdings at the time the Fund sells the options. By purchasing put options and selling call options on the value of the portfolio of stocks in the NASDAQ 100® Index, the Fund's collar strategy may generate income while protecting the Fund from a significant decline in the price of the NASDAQ 100® Index, if the put options become in the money. If the value of the NASDAQ 100® Index is below the strike price of the Fund's put options positions upon the expiration of the put option, then at expiration the put will be worth the difference between the strike price and the value of the NASDAQ 100® Index, so the value of the put option would protect the Fund from further losses below the strike price of the put. For example, if the NASDAQ 100® Index were to fall by 15% from the time the put option was purchased to the time the put option expired, then the put option would be expected to have a value equal to approximately 10% of the value the portfolio had at the time when the put option was purchased, which would limit the Fund's loss from the decrease in the NASDAQ 100® Index over the relevant period to 5%. The value of protection the Fund provides from declines in the price of the NASDAQ 100® Index during the period a given put option contract is held will vary depending on the relative difference between the strike price of the Fund's put option position and the price of the NASDAQ 100® Index. Similarly, if the level of the NASDAQ 100® Index is above the strike price of the Fund's call options positions upon the expiration of the call option, then at expiration the Fund would owe the purchaser of the call option the difference between the strike price and the value of the NASDAQ 100® Index, so the amount owed with respect to the call option offset any gains the Fund may experience from the securities held. For example, if the NASDAQ 100® Index were to increase by 15% from the time the call option was sold to the time the call option expired, then the call option would be expected to have a value equal to approximately 15% of the value the portfolio had at the time when the put option was purchased, which offset all of the Fund's gains from the increase in the NASDAQ 100® Index over the relevant period. However, if the price of the NASDAQ 100® Index is below the strike price of the Fund's call options positions at expiry, the call options will expire worthless and the Fund will retain the premium. An investor that purchases Fund shares other than on the day that the Fund takes long positions in monthly put options and short positions in monthly call options, or who sells shares other than on the day that the put options and call options expire, may experience different investment returns, depending on the relative difference between the strike price of the Fund's put options positions and call options positions, and the price of the NASDAQ 100® Index.

The Fund generally will use a replication strategy. A replication strategy is an indexing strategy that involves investing in the securities of the Underlying Index in approximately the same proportions as in the Underlying Index. However, the Fund may utilize a representative sampling strategy with respect to the Underlying Index when a replication strategy might be detrimental to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to follow the Underlying Index, in instances in

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

which a security in the Underlying Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not the Underlying Index.

The Adviser expects that, over time, the correlation between the Fund's performance and that of the Underlying Index, before fees and expenses, will exceed 95%. A correlation percentage of 100% would indicate perfect correlation. If the Fund uses a replication strategy, it can be expected to have greater correlation to the Underlying Index than if it uses a representative sampling strategy.

The Fund concentrates its investments (i.e., holds 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Underlying Index is concentrated. As of December 31, 2025, the Underlying Index had significant exposure to the information technology sector. The Fund is classified as "non-diversified," which means it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. There is no guarantee that the Fund will achieve its investment objective. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Adviser or any of its affiliates. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Funds** section of the Fund's Prospectus and in the Statement of Additional Information ("SAI").

Asset Class Risk: Securities and other assets in the Underlying Index or otherwise held in the Fund's portfolio may underperform in comparison to the general securities markets, a particular securities market or other asset classes.

Derivatives Risk: The Fund will invest in options, a type of derivative instrument. Derivatives can be more sensitive to changes in interest rates or to sudden fluctuations in market prices than conventional securities, which can result in greater losses for the Fund. In addition, the prices of the derivative instruments and the prices of underlying securities, interest rates or currencies they are designed to reflect may not move together as expected. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the relevant reference index. Derivatives are usually traded on margin, which may subject the Fund to margin calls. Margin calls may force the Fund to liquidate assets. If a counterparty to an options contract entered into by the Fund becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline. Further, the market for certain investments, such as options contracts, may become illiquid under adverse market or economic conditions independent of any specific adverse changes in the conditions of a particular issuer. If the Fund needed to sell a large block of illiquid securities to meet shareholder redemption request or to raise cash, these sales could further reduce the securities' prices and adversely affect performance of the Fund.

Equity Securities Risk: Equity securities are subject to changes in value, and their values may be more volatile than other asset classes, as a result of a company's business performance, investor perceptions, stock market trends and general economic conditions.

Capitalization Risk: Investing in issuers within the same market capitalization category carries the risk that the category may be out of favor due to current market conditions or investor sentiment.

Large-Capitalization Companies Risk: Large-capitalization companies may adapt more slowly to new competitive challenges and changing market conditions than smaller capitalization companies. In addition, large-capitalization companies may be more mature and subject to more limited growth potential and consequently may underperform other segments of the equity market or the market as a whole.

Collar Option Risk: The Fund's collar strategy will consist of a mix of short call options positions and long put options positions. By selling call options in return for the receipt of premiums, the Fund will give up the opportunity to benefit from potential increases in the value of the Underlying Index above the exercise prices of such options. By purchasing put options in return for the payment of premiums, the Fund may be protected from a significant decline in the price of the Underlying Index if the put options become in the money, but during periods where the Underlying Index appreciates, the Fund will underperform due to the cost of the premiums paid. Investors who purchase shares of the Fund outside of when the Fund's short call options positions and long put options positions are put on may experience different levels of downside protection and upside participation depending on market performance. In addition, the Fund's ability to sell the securities underlying

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

the options will be limited while the options are in effect unless the Fund cancels out the options positions through the purchase or sale of offsetting identical options prior to the expiration of the options. Exchanges may suspend the trading of options in volatile markets. If trading is suspended, the Fund may be unable to purchase or sell options at times that may be desirable or advantageous to do so, which may increase the risk of tracking error.

Cybersecurity Risk: With the increased use of technologies such as the Internet to conduct business, the Fund, like all companies, may be susceptible to operational, information security and related risks. Cybersecurity incidents involving the Fund and its service providers (including, without limitation, the Adviser, fund accountant, custodian, transfer agent and financial intermediaries) have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, impediments to trading, the inability of Fund shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, and/or additional compliance costs.

Focus Risk: The Fund may from time to time have a significant amount of its assets invested in a particular industry, group of industries, or one or more sectors to approximately the same extent that the Underlying Index focuses in investments related to a particular industry, group of industries, and/or one or more sectors. In such event, the Fund's performance will depend to a greater extent on the overall condition of such industry(ies) or sector(s), and an economic, business, political, regulatory, or other occurrence affecting such industry(ies) or sector(s) will have an increased impact on the value of the Fund's shares compared to the value of shares of a fund that invests in a broader range of industries or sectors.

Risks Related to Investing in the Information Technology Sector: Companies in the information technology sector are subject to rapid changes in technology product cycles, rapid product obsolescence, government regulation, and increased competition. Information technology companies are particularly vulnerable to failure to obtain, or delays in obtaining, financing or regulatory approval, and also are heavily dependent on patent and intellectual property rights. In addition, information technology companies may have limited product lines, markets, financial resources or personnel.

Risks Related to Investing in the Semiconductors and Semiconductor Equipment Industry: The semiconductors and semiconductor equipment industry is highly competitive, and certain companies in this industry may be restricted from operating in certain markets due to the sensitive nature of these technologies. Companies in this space generally seek to increase silicon capacity, improve yields, and reduce die size in their product designs which may result in significant increases in worldwide supply and downward pressure on prices. Companies involved in the semiconductors and semiconductor equipment industry face increased risk from trade agreements between countries that develop these technologies and countries in which customers of these technologies are based. Lack of resolution or potential imposition of trade tariffs may hinder the companies' ability to successfully deploy their inventories. The success of such companies frequently depends on the ability to develop and produce competitive new semiconductor technologies. Companies in this industry frequently undertake substantial research and development expenses in order to remain competitive, and a failure to successfully demonstrate advanced functionality and performance can have a material impact on the company's business.

Foreign Securities Risk: Investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs")) are subject to additional risks, including lower levels of liquidity and market efficiency; greater securities price volatility; exchange rate fluctuations and exchange controls; less availability of public information about issuers; limitations on foreign ownership of securities; imposition of withholding or other taxes; imposition of restrictions on the expatriation of the assets of the Fund; restrictions placed on U.S. investors by U.S. regulations governing foreign investments; higher transaction and custody costs and delays in settlement procedures; difficulties in enforcing contractual obligations; lower levels of regulation of the securities market; weaker accounting, disclosure and reporting requirements; and legal principles relating to corporate governance and directors' fiduciary duties and liabilities. The countries in which the Fund invests may also be subject to structural risks, including economic, political and social instability. Additionally, certain securities held by the Fund, while traded on U.S. exchanges, may be issued by foreign financial institutions and as such, may be subject to the risks of investing in securities issued by foreign companies, which may not be subject to the same regulations as companies domiciled in the U.S. Where all or a portion of the Fund's securities trade in a market that is closed when the market in which the Fund's Shares are listed and trading is open, there may be differences between the last quote from the security's closed foreign market and the value of the security during the Fund's domestic trading day. This, in turn, could lead to differences between the market price of the Fund's Shares and the underlying value of those shares.

Geographic Risk: The Fund's investments in securities of issuers located in a particular country or geographic region may subject the Fund to certain risks to a greater extent than if its investments were less focused, including: natural, biological or other disasters and the spread of infectious diseases; economic, political and social instability; security concerns; and trade disputes with key trading partners. The securities in

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

which the Fund invests and, consequently, the Fund are also subject to specific risks as a result of their business operations in a particular country or region, including, but not limited to:

Risk of Investing in Developed Markets: Investments in a developed country's issuer may subject the Fund to legal, regulatory, political, currency, security, and economic risks specific to developed countries. Developed countries tend to represent a significant portion of the global economy and have generally experienced slower economic growth than some less developed countries. Certain developed countries have experienced security concerns, such as war, terrorism and strained international relations. Incidents involving a country's or region's security may cause uncertainty in its markets and may adversely affect its economy and the Fund's investments. In addition, developed countries may be adversely impacted by changes to the economic conditions of certain key trading partners, regulatory burdens, debt burdens and the price or availability of certain commodities.

Risk of Investing in the United States: Investments in United States issuers may subject the Fund to legal, regulatory, political, currency, security, and economic risks specific to the United States. A decrease in imports or exports, changes in trade regulations, inflation and/or an economic recession in the U.S. may have a material adverse effect on the U.S. economy.

Indexing Strategy Risk: The Fund is not actively managed, and the Adviser does not attempt to take defensive positions in declining markets. Unlike many investment companies, the Fund does not seek to outperform its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Additionally, if a constituent of the Underlying Index were removed, even outside of a regular rebalance of the Underlying Index, the Adviser anticipates that the Fund would sell such security. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Index-Related Risk: There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

Management Risk: The Fund may not fully replicate its Underlying Index and may hold securities not included in its Underlying Index. The Adviser's investment strategy, the implementation of which is subject to a number of constraints, may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective.

Tracking Error Risk: Tracking error may occur because of differences between the instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences, transaction costs incurred by the Fund, the Fund's holding of uninvested cash, size of the Fund, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not.

Issuer Risk: Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of such company's securities to decline.

Market Risk: Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund and its investments. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns. Trade policy, including the imposition of tariffs, may dampen consumer spending and result in decreased confidence in the markets. Additionally, political uncertainty regarding U.S. policy, including the U.S. government's approach to trade, may also impact the markets. Furthermore, local, regional or global events such as war, acts of terrorism, the spread of infectious diseases, inflation and recessions, changes in interest or exchange rates, or other events could have a significant impact on the Fund and its investments and trading of its Shares. Market risk factors may result in increased volatility and/or decreased liquidity in the securities markets.

Non-Diversification Risk: The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940 ("1940 Act"), which means that the Fund may invest a greater portion of its assets in securities of individual issuers than a diversified fund. As a result, changes in the market value of a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

Operational Risk: The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes, cyber security incidents, and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Options Premium Tax Risk: An option premium is not subject to taxation upon receipt but rather when such option is exercised, is sold or lapses. The Fund's investment strategy may limit its ability to distribute dividends eligible for treatment as qualified dividend income, which for non-corporate shareholders are subject to federal income tax at rates of up to 20% plus the 3.8% Medicare tax. The Fund's investment strategy may also limit its ability to distribute dividends eligible for the dividends-received deduction for corporate shareholders. For these reasons, a significant portion of distributions received by Fund shareholders may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. You should consult your tax advisor as to the tax consequences of acquiring, owning and disposing of Shares in the Fund.

Risks Associated with Exchange-Traded Funds: As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk: The Fund has a limited number of financial institutions that may act as Authorized Participants and engage in creation or redemption transactions directly with the Fund, and none of those Authorized Participants is obligated to engage in creation and/or redemption transactions. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, such as in times of market stress, Shares may be more likely to trade at a premium or discount to NAV and/or at wider intraday bid-ask spreads, and possibly face trading halts and/or delisting from an exchange.

Large Shareholder Risk: Certain shareholders, including an Authorized Participant, the Adviser, an affiliate of the Adviser, or funds managed by the Adviser, may own a substantial amount of the Fund's Shares. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on a national securities exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Listing Standards Risk: The Fund is required to comply with listing requirements adopted by the listing exchange. Non-compliance with such requirements may result in the Fund's shares being delisted by the listing exchange. Any resulting liquidation of the Fund could cause the Fund to incur elevated transaction costs and could result in negative tax consequences for its shareholders.

Market Trading Risks and Premium/Discount Risks: Shares of the Fund are publicly traded on a national securities exchange, which may subject shareholders to numerous market trading risks. In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares, as well as disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of assets in the Fund or an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates, in some cases materially, throughout trading hours in response to changes in the Fund's NAV.

Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

Turnover Risk: The Fund may engage in frequent and active trading, which may significantly increase the Fund's portfolio turnover rate. At times, the Fund may have a portfolio turnover rate substantially greater than 100%. For example, a portfolio turnover rate of 300% is equivalent to the Fund buying and selling all of its securities three times during the course of a year. A high portfolio turnover rate would result in high brokerage costs for the Fund, may result in higher taxes when Shares are held in a taxable account and lower Fund performance.

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

Valuation Risk: The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology (such as during trading halts). The value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

PERFORMANCE INFORMATION

The bar chart and table that follow show how the Fund performed on a calendar year basis and provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns for the indicated periods compare with the Fund's broad-based benchmark index, which reflects a broad measure of market performance, the Underlying Index and NASDAQ 100® Index, which more closely represent the exposure sought by the Fund. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.globalxetfs.com.

Annual Total Returns (Years Ended December 31)

Average Annual Total Returns (for the Periods Ended December 31, 2025)

	One Year Ended December 31, 2025	Since Inception (8/25/2021)
Global X NASDAQ 100® Risk Managed Income ETF:		
·Return before taxes	3.88%	1.37%
·Return after taxes on distributions ¹	2.34%	0.27%
·Return after taxes on distributions and sale of Fund Shares ¹	2.27%	0.55%
S&P 500 Index (USD) (TR) (Index returns do not reflect deduction for fees, expenses, or taxes)	17.88%	11.77%
NASDAQ-100 Monthly Net Credit Collar 95-100 Index (USD) (TR) (Index returns do not reflect deduction for fees, expenses, or taxes)	5.23%	1.90%
NASDAQ-100® Index (USD) (TR) (Index returns do not reflect deduction for fees, expenses, or taxes)	21.02%	12.97%

¹ After-tax returns are calculated using the historical highest individual U.S. federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown above. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-advantaged arrangements, such as 401(k) plans or individual retirement accounts (IRAs).

FUND MANAGEMENT

Investment Adviser: Global X Management Company LLC.

Portfolio Managers: The professionals primarily responsible for the day-to-day management of the Fund are Wayne Xie and Vanessa Yang, CFA ("Portfolio Managers"). Mr. Xie and Ms. Yang have been Portfolio Managers of the Fund since the Fund's inception.

PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are or will be listed and traded at market prices on a national securities exchange. Shares may only be purchased and sold on the exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only "Authorized Participants" (as defined in the SAI) who have entered into agreements with the Fund's distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks called Creation Units. The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that the national securities exchanges are open for business ("Business Day"). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). To access information regarding the Fund's net asset value, market price, premiums and discounts, and bid-ask spreads, please go to www.globalxetfs.com.

TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-advantaged arrangement such as a 401(k) plan or an individual retirement account ("IRA"), in which case distributions from such tax-advantaged arrangement may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer, sales persons or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.
